6. a. A definite portion of play in any 'game' (sense 4), terminated by the victory of one side, or the recognition that no victory can be gained; 'a match at play' (J.).

In mod. use the exact meaning of the term is often determined somewhat arbitrarily by the rules of the particular 'game' concerned. In card-playing, a 'game' ends when every player has played all his cards, though usually the contest is not considered as ended until a definite number of 'games' (in Whist, a 'rubber') have been played. In some sports a 'game' ends after a prescribed number of acts have been performed, or a prescribed number of partial victories gained.

gander ('gændə(r)), *sb.* Forms: 1 gan(d)ra, 3–4 gandre, 5 gandere, (-dir, -dur), gonder, 6 gaundre, *Sc.* ganar, gan(n)er, 9 *dial.* ganner, gonder, 4– gander. [The orig. stem is perhaps **ganron-*, the *d* being a euphonic insertion between *n* and *r* as in *thunder*:—OE. *punor*. Outside of English the word is found only in Du., LG. and South Ger. *gander*, MLG. *ganre*; the other Teut. languages show different formations, as G. *gänserich* (earlier *ganser*), ON. *gasse*, Sw. *gåse*.

Although used as the masc. of GOOSE (OE. *gós*:—OTeut. **gans-*) there is some doubt whether it is etymologically cognate with that word. While *goose* represents an OAryan **ghans-* with palatal *gh-*, it is possible that OE. *gan(d)ra* may be cognate with Lith. *gándras* stork; this would imply a root beginning with velar *gh-*, to which may also be referred OE. *ganot* GANNET, OHG. *ganazzo*, *ganzo* (MHG. *ganze*, also *genz*), Du. *gent*, all meaning 'gander'. Cf. *ganta*, said by Pliny *N.H.* X. xxii. 27 to be the Ger. name of a small white goose, OF. *gante*, *jante*, *gente*, wild goose, Pr. *ganta* wild goose (in the mod. dialects variously used for 'wild goose', 'black stork', and 'heron'). It has been conjectured that *gander* may have been originally the special name of some kind of water-bird, and that its association with *goose* is accidental, perh. arising from the alliterative phrase 'goose and gander'.]

[Common Teutonic: OE. *gangan, gǫngan* = OFris. *gunga*, OS. *gangan* (MDu. *gangen*), OHG. *gangan* (MHG. *gangen*), ON. *ganga* (Sw. *gånga*, Da. *gange* obs.), Goth. *gaggan*:—OTeut. **gaŋgan*. The use of the verb is also greatly restricted in favour of GO, OE. *gán*, which finally supplanted *gang* exc. in the northern dialects. The same tendency appears in most of the cognate languages; thus Du. *gaan* (pa. t. *ging*, pa. pple. *gegaan*), G. *gehen* (*ging, gegangen*), Sw. *gå* (*gick, gått*), Da. *gaa* (*gik, gaaet*), but Icel. *ganga* (rarely *gá* from Da.). *Gang*, however, survives to some extent in various G. dialects and in Fris. The OTeut. *gaŋgan* is prob. related to Lith. *žengiù* I stride, go, Skr. *jánghā* the lower part of the leg, from the root **ghoŋgh-*, **gheŋgh-*. For the relation between this and GO, see the latter.

In Sc. *gang* is now used chiefly in the inf. and pres. tense, while *go* furnishes the pa. t. (*gaed*) and the pa. pple.]

OHG. *warjan* to defend (= OE. *werian* WEAR *v.*^{2}).

Senses 1 and 2 agree with the uses of the French word. The further development is app. due to confusion with F. *garnison* GARNISON, which had the same meanings of 'defence' and 'supplies', as well as that of 'garrison'. There is not sufficient evidence to show that the last was ever a common sense of F. *garison*: Godefroy gives only one quotation for it. It seems probable that the specially English sense of 'fortress', 'stronghold' (see 3), led to the identification of the two words and to the final adoption of 'garrison' in place of 'garnison'.]

2. a. ***the Garter***, the badge of the highest order of English knighthood. Hence, membership of this order; the order itself.

The institution of the order is commonly (on the authority of Froissart) attributed to Edward III about the year 1344. By the time of Selden (1614) it was traditionally asserted that the garter was that of the Countess of Salisbury, which fell off while she danced with the King, who picked it up and tied it on his own leg, saying to those present *Honi soit qui mal y pense*. The Garter as the badge of the Order is a ribbon of dark-blue velvet, edged and buckled with gold, and bearing the above words embroidered in gold, and is worn below the left knee; garters also form part of the ornament of the collar worn by the Knights.

gas (gæs), *sb.*^{1} Pl. gases ('gæsɪz). Forms: 7–8 gass, 8–9 gaz, 7- gas. [A word invented by the Dutch chemist, J. B. Van Helmont (1577–1644), but avowedly based upon the Gr. χάος ('halitum illum *Gas* vocavi, non longe a Chao veterum secretum.' *Ortus Medicinæ*, ed. 1652, p. 59 a); the Dutch pronunciation of *g* as a spirant accounts for its being employed to represent Gr. χ; perh. suggested by Paracelsus's use of *chaos* for the proper element of spirits such as gnomes: see GNOME^{2}.

Van Helmont's statement having been overlooked, it has been very commonly supposed that he modelled his word on Du. *geest* spirit, an idea found at least as early as 1775 (Priestley *On Air* Introd. 3). Van H. also invented the term BLAS, which has not survived, while *gas* has been adopted (usually in the same form) in most European languages; the spelling in F. and Pg. is *gaz*, which was also employed by English writers for a time.]

†1. An occult principle supposed by Van Helmont to be contained in all bodies, and regarded by him as an ultra-rarefied condition of water (see quot. 1662). *Obs.*

But Gas it self, materially taken, is water as yet masked with the Ferment of composed Bodies. **1692** tr. *Blancard's Phys. Dict.* (1693) 99/2 *Gas*, a term used by Helmont, and signifies a Spirit that will not coagulate, or the Spirit of Life, a Balsom preserving the Body from Corruption. **1743** *Lond. & Country Brew.* II. 2. Any aeriform or completely elastic fluid; matter in the condition of an aeriform fluid. Usually applied only to those elastic fluids which remain such at ordinary atmospheric temperatures; the gaseous forms of substances ordinarily found solid or liquid being by preference called *vapours*.

gate (geɪt), *sb.*[1] Forms: *α.* 1 ȝeat, ȝet (*Northumb.* ȝæt, ȝeat(t), 2–4 ȝeat, (3 giate), 2–6 ȝet, 3–5 ȝat(t)e, 3–5, 6–9 *dial.* yat(t)e, 4–6 yhate, -et, ȝett, 5–6 yet(e, 7–9 *dial.* yeat(t, 6– *Sc.* yett. *β.* (1 *pl.* gatu), 2–6 gat, (4 gatte, 5 gaytt, 6 gaat), 3– gate. [OE. *ȝeat* str. neut., corresponds formally to OFris. *gat*, *jet*, hole, opening, OS. *gat* eye of a needle (LG. and Du. *gat* gap, hole, breach), ON. *gat* (see GAT[1]):—OTeut. type **gato*^{m}. The word is wanting in Goth. and HG.

The ulterior etymology is obscure. Some scholars refer the word to the root of GET *v.*, supposing the etymological sense to be either 'receptable' (hence 'cavity', 'hole', 'opening') or ' means of reaching' (hence 'way of access'). It is however very uncertain whether it is allied either to GET or to GATE *sb.*[2]

The original OE. declension was *gæt*, *gætes*, *gæte* in the sing., and *gatu*, *-a*, *-um* in the plur., according to the phonetic law by which *a* became *æ* exc. when a back vowel followed in the next syllable. Subsequently the *g* (= ȝ) before *æ* became palatalized, and the influence of the palatal ȝ caused the change of *æ* into *ea*. Hence the stem assumed the two forms *ȝeat-* and *gat-*, which are respectively represented by the *α* and *β* types in the later language. In late OE. the functional distinction between the two types was already disappearing through the operation of analogy, so that we find such forms as *gates*, *gate* (sing.) and *ȝeatu*, *ȝeatum* (pl.); in Mercian the forms *geatu*, *-um* (with guttural) are earlier, being due not to analogy but to the phonetic laws of the dialect. In ME. the *α* forms are universal in northern and in north- and west-midland writers, and also prevailed in the s.w. (Robert of Gloucester, the *South-Eng. Legendary*, etc.); the MSS. of Chaucer have *gate* in some passages and *ȝate* in others. Since the 16th c. *gate* has been the sole form in literary English; dialectally the forms with *y* remain in northern and north-midland districts, so far as they have not been displaced by the influence of the literary language; occasionally they are found surviving elsewhere, as in N. Devon and at Banbury (Ellis *Phonol. Eng. Dialects*).]

1952 W. SHOCKLEY in *Proc. Inst. Radio Engineers* Nov. 1368/1 The principles of operation of the unipolar transistor are substantially different from those of the bipolar types. For thia reason, it seems appropriate to consider choosing a new set of names for the three terminals... The choice selected is 'source'.., 'drain'.., and 'gate' for the control electrodes that modulate the channel. One reason for selecting 'gate'.. is that the subscript '*g*' is reminiscent of 'grid' and the analogy is close between the two. **1959** J. N. SHIVE *Semiconductor Devices* xiii. 237 The gates act like the control grid wires in that the voltage applied to the gates determines the width of the channel through which source-to-drain current may flow. **1970** D. F. SHAW *Introd. Electronics* (ed. 2) xii. 304 In normal operation the gate [of a field effect transistor] must always be reverae biassed with respect to source and drain.

gate (geit), *sb.*[2] Now only *Sc.* and *north. dial.* Forms: α. 3- gate, (3, 5 gatt(e, 4-5 gat). β. 5-7 gaite, gayte, 4, 8 *Sc.* get(e, 8 *Sc.* gaet, 9 *dial.* geeat. See also GAIT. [a. As to the ulterior etymology nothing has been ascertained. Connexion with the root of GET *v.* has been supposed for this as for GATE *sb.*[1]; some have assumed a root **ghod* meaning 'to go', on the ground of the OIr. *dio n-goidh* he went. The spelling *goit* (*goyte*) first appears in the 15th c., but was almost confined to Sc. and northern writers until the beginning of the 17th c. It remains in the only sense of the word which is current in literary English: see GAIT *sb.* (A supposed example of this spelling has been found in the Cotton MS. of the *Cursor M.*, line 15278; but this is prob. a mistake: see GATE *sb.*[3])]

gaud, *sb.*[1] *Obs.* exc. *Hist.* In quots. gaude. See also GAUDY *sb.* [Of somewhat uncertain origin.

Du Cange cites an Anglo-Latin document of 1415 which has *gaud:a* (pl. of *gaudium* joy) in this sense. It does not appear that *gaudia* was so used on the continent, and in this example it is prob. only a latinization of the Eng. word. At the same time, it seems likely that the L. *gaudia* is really the source, and that the 'gauds' were so called as serving to mark the fifteen mysteries (the first five of which are 'joyful mysteries') to be meditated upon in reciting the fifteen decades of aves. An AF. *gaudes* pl., app. in this sense, occurs in a document of 1381 (Nichols *Royal Wills* (1780) 100). Cf. also 17th c. F. *gaudees*, explained in Oudin's *Fr.-It. The OFr. word is found, along with the related vb. *gauger*, in the 13th c.; the earliest sense appears to be 'action or result of measuring', the sense 'inatrument of measurement' being prob. derivative; the sb. is perh. f. the vb. Horning's conjecture that the word repreaents Teut. **galgon-* (see GALLOWS *sb.*) in its assumed primary sense of 'rod' is not very satisfactory from the Teut. point of view; derivation from L. **æquālificāre* or *quālificāre* (Die2) is impossible.

gauss (gaʊs). *Physics.* Also Gauss. [f. the name of a German mathematician and natural philosopher, Karl Friedrich *Gauss* (1777-1855).] The electromagnetic unit of magnetic induction (flux density) in the C.G.S. system, defined as the induction that exerts a force of one dyne on each centimetre of a straight wire carrying one e.m.u. (10 amp.) of current, when the induction is perpendicular to the wire. (In the International System of Units the gauss is replaced by the tesla, or weber per square metre, equal to 10,000 gauss.)

The name has been suggested for various magnetic units. The original sense was the C.G.S. unit of magnetic field strength (later called an *oersted*), and, because in the C.G.S. system the electromagnetic units of field strength and of induction have the same dimensions and *in vacuo* are numerically the same, the word has freq. been used for both indiscriminately.

1882 *Nature* XXVI. 391 Two other units may have to be added, the one expressing that of magnetic field.. Sir W. Thomson suggested the former.. and pointed out that it would be proper to attach to it the name of Gauss.. A Gauss will then be defined as the intensity of field produced by a Weber at the distance of one centimetre. **1891** L. CLARK *Dict. Metric & Other Useful Measures* 38 *Gauss*, a unit [*printed* unity] of intensity of magnetic field, proposed by Prof. S. P. Thompson. = 10^{8} C.G.S. units. Other values have also been suggested. **1893** *Electrician* 29 Sept. 579/1 Some attempt was made to secure the adoption of the name of 'gauss' for the C.G.S. unit of magnetic field. **1895** *Rep. Brit. Assoc.* 196 The Committee [*sc.* the British Association Committee on Electrical Standards].. recommend for tentative adoption the following terminology... That the c.g.s. unit of magnetic potential or of magneto-motive force be called a *gauss*... Hence the number of gausses round any closed curve linked on an electric circuit is equal to 1·2566 the number of ampère-turns in this circuit. **1913** C. W. C. BARLOW *Electr. & Magn.* xii. 241 The Gauss is the unit of Magnetic Induction and also of Field, the Gilbert of M.M.F... These names are not in common use. **1930** *Nature* 16 Aug. 252/2 The committee on nomenclature [of the International Electrotechnical Commission].. adopted the following names for the magnetic C.G.S. units. The unit of magnetic flux was called the 'maxwell' and the unit of flux density the 'gauss'. **1947** *Science News* IV. 116 The gauss is the unit of the magnetic field. It exerts unit force (1 dyne) on a unit magnetic pole placed in it. **1955** *Sci. Amer.* May 56/3 The earth's field near the poles is ·7 gauss. **1962** A. R. W. HAYES *Revision Physics* v. 170 In free space an applied field H oersted produces a flux density H gauss; in a magnetic medium the flux density is modified to a value B gauss which is the sum of the original flux and that due to magnetization of the medium. **1965** A. H. MORRISH *Physical Princ. Magn.* i. 2 The cgs unit of magnetic field is the oersted, although the term gauss is still frequently used.

Gaussian ('gaʊsɪən), *a.* [f. the name of K. F. *Gauss* (see GAUSS) + -IAN.]

a. Discovered or formulated by Gauss.

1874 *Rep. Brit. Assoc. 1873* 75 Gaussian logarithms have for their object to facilitate the finding of the logarithms of the sum and difference of two numbers whose logarithms are known, the numbers being themselves unknown. **1881** *Proc. WEBSTER *Theory Electr. & Magn.* II. ix. 367 We may, when dealing with electrical quantities, assume that the dimensions of the electrical inductivity are zero. This gives the electrostatic system of units. We may.., when dealing with magnetic quantities, assume that the dimensions of the magnetic inductivity are zero. This gives the magnetic system. Both these systems are due to Gauss, and when we use both systems for their respective kinds of quantities, we shall say that the quantities are measured in *Gaussian* units. **1957** B. & B. I. BLEANEY *Electr. & Magn.* xxiii. 646 In electromagnetic theory Maxwell's equations involve both electrical and magnetic units, and in the c.g.s. system they are generally written in mixed or Gaussian units.

b. *Statistics.* Designating a curve, frequency distribution, or statistical process, etc., that is described mathematically by a function of the form $\exp(-x^2/2\sigma^2)/\sqrt{(2\pi\sigma^2)}$, where x is the variable.

1905 K. PEARSON in *Biometrika* IV. 173 Many of the other remedies which have been proposed to supplement what I venture to call the universally recognised inadequacy of the Gaussian law.. cannot.. effectively describe the chief deviations from the Gaussian distribution. *Ibid.* 189 In writing for Germans I naturally spoke of the Gaussian curve. **1920** *Biometrika* XIII. 10 To get the Gaussian or normal curve we must.. replace differences by differentials and we have $(dy/dx)/y = -x/\sigma_0^2$. *Ibid.* 15 The so-called Gaussian or normal curve was first introduced into statistics as a *rough and ready* solution for the sum of a certain number of terms in a definite hypergeometrical series. **1968** P. A. P. MORAN *Introd. Probability Theory* ix. 424 The homogeneous additive process in which the distribution of $x(t_1) - x(t_2)$ is always a normal distribution is known by various names as the Gaussian, normal, Wiener, or Brownian process.

When the meaning of the word came to be misunderstood (see 2), attempts were made to assign to it an etymology expressive of the custom of equal division of a deceased person's land among his male children; favourite explanations in the 16th c. were 'give al kinde' (Rastell 1557), and 'give all kyn' (Lambarde 1576); sometimes the word was written in pseudo-etymological fashion as *gavealkin, gaveall-kind.* The application of the Kentish term to the Welsh and Irish system of succession led to the notion that the word was of Celtic origin: a Welsh derivation from *gafael* to take, and *cenedl* race, family, was proposed in the 16-17th c.; an alleged Irish *gabháil-cine* (from *gabháil* to take, taking, and *cine* tribe, sept) appears with the rendering 'gavelkind' in O'Reilly's Irish Dictionary.]

1. The name of a land-tenure existing chiefly in Kent.

The name implies that it was originally a tenure by 'gavel', i.e. by the payment of rent or fixed services other than military; this agrees with the indentification of it with SOCAGE (quot. 1253). After the Conquest, the Kentish form of socage was distinguished by certain customs elsewhere generally disused (cf. quot. 1702). Of these the most conspicuous was the custom by which a tenant's land at his death was divided equally among his sons; hence, even in early times, 'gavelkind' and 'partible land' are used as equivalent terms.

The earliest quots. give its value as about three farthings, but Cotgr. says of the F. *gazette*, 'scarce worth our farthing', and quot. 1682 agrees with this. Probably its worth varied in different places, as it was coined at Venice for circulation in the Levant.

The *gazzetta* was first published in Venice about the middle of the 16th c., and similar news-sheets appeared in France and England in the 17th. The untrustworthy nature of their reports is often alluded to by writers of that period; thus Florio explains *gazzette* as 'running reports, daily newes, idle intelligences, or flim flam tales that are daily written from Italie, namely from Rome and Venice'.

On the analogy of this and some other words, the suffix *-ine* (see -INE, -IN) was adopted by chemists for forming names of 'extractive principles'. In popular use the spelling is commonly *gelatine*, and the pronunc. is often (dʒɛlətɪ:n); in chemical use consistency demands the form *gelatin*.]

-gen (-dʒɛn), *suffix*, forming *sbs.* in mod. scientific use; ad. F. *-gène*, ultimately repr. Gr. *-γενής* (f. *γεν-* root of *γί-γν-εσθαι* to be born, become, *γεν-νάειν* to beget, *γέν-ος* kind, etc.: see KIN) an adjective suffix which has two different uses: (1) giving the sense 'born in a certain place or condition', as in *οἰκογενής*, *ἐνδογενής* born in the house (respectively f. *οἶκος* house and *ἔνδον* within); (2) giving the sense 'of a (specified) kind', as in *ὁμογενής* of the same kind, homogeneous, *ἑτερογενής* of another kind, heterogeneous. The F. *-gène* in scientific terms has two distinct applications (of different origin) both of which have been adopted in Eng.

1. *Chem.* In 1777-9 Lavoisier (*Œuvres* II. 249) proposed for the recently discovered element (till then known as 'dephlogisticated air', etc.) the alternative names *principe acidifiant* and *principe oxygine*, which he states to be etymologically synonymous. In G. de Morveau *Nomencl. chimique* 1787 (prepared in collaboration with Lavoisier and other chemists) the sbs. *oxygène* and *hydrogène* occur, and are explained to mean 'engendrant l'acide' and 'engendrant l'eau'; and in Lavoisier's *Traité de Chimie* 1789 the etymon of the suffix is said to be 'Gr. *γείνομαι*, j'engendre'. This etymology accounts for Lavoisier's original form *oxygine*; the change of *-gine* into *-gène* must have been due to the observation that *-gine* did not occur in Gr. derivatives, while *-gène*, from the same root, already existed in *hétérogène*, *homogène* (ad. Gr. words in *-γενής*: see above); the fact that the suffix *-γενής* in Gr. words was not capable of meaning 'that which produces' was overlooked or disregarded. The names *oxygène*, *hydrogène*

were soon adopted into Eng. with the ending *-gene*, afterwards altered to *-gen*. On the analogy of these words, a considerable number of new terms have been added to the common (French and Eng.) vocabulary of chemistry, in which the ending *-gène*, *-gen* expresses the sense 'that which produces'; they are usually names of chemical substances, as *nitrogen*, *amidogen*, *cyanogen*, etc.; rarely of classes of substances, as *halogen*, †*amphigen*.

2. *Bot.* The botanical use of *-gène* was introduced in 1813 by Decandolle (*Théorie de Botanique* 210) in the words *endogène*, *exogène*, adjs. designating two classes of plants which respectively produce their new tissue internally (Gr. ἔνδο-ν within) and externally (Gr. ἔξω outside). The formation of the words was suggested by the older terms *endorhize*, *exorhize*. Decandolle gives as the etymon of the suffix 'γενναω [*sic!*], j'engendre, je crois'; app. his *-gène* was not a new adoption from Gr. *-γενής*, but a different application of the *-gène* already used in chemical terms, which he vaguely remembered to be derived from a Gr. root meaning 'to produce, to grow'. The adjs. *endogène*, *exogène* first came into Eng. in the adapted forms *endogenous*, *exogenous*; Lindley *c* 1845 formed from these the sbs. *endogen*, *exogen*; and he and others added many analogous terms denoting classes of plants, the first element indicating the part at which the new growth takes place, or some characteristic of their mode of growth, as *acrogen*, *amphigen*, *dictyogen*, *thallogen*. The suffix is also occasionally used in terms denoting plant tissues that give rise to particular kinds of cells, as *calyptrogen*, *dermatogen*, *phellogen*.

3. *Geol.* In the form -gene, used in terms indicating the type, method, or place of formation, as *tectogene*.

2. *Gram.* Each of the three (or in some languages two) grammatical 'kinds', corresponding more or less to distinctions of sex (and absence of sex) in the objects denoted, into which substantives are discriminated according to the nature of the modification they require in words syntactically associated with them; the property (in a sb.) of belonging to, or (in other parts of speech) of having the form appropriate to concord with, a specified one of these kinds. Also, the distinction of words into ' genders', as a principle of grammatical classification.

In the Indo-European langs. there were originally three genders, the masculine and feminine, to which respectively belonged the great majority of nouns denoting male and female persons or animals; and the neuter, including chiefly nouns denoting things without sex. But great numbers of words denoting inanimate objects were of the masculine or feminine gender, without even any figurative attribution of sex; and in some cases the names of objects possessing sex were of the neuter gender. In Semitic, and in the Romanic langs., there are only two genders, masculine and feminine. In many langs. the adjectives, and in some langs. the verbs, have inflexions depending on the gender of the sbs. to which they syntactically refer. Mod. English has 'natural' as opposed to 'grammatical' gender; i.e. nouns are masculine, feminine or neuter according as the objects they denote are male, female, or of neither sex; and the gender of a noun has no other syntactical effect than that of determining the pronoun that must be used in referring to it. For *common*, *epicene gender*, see those words.

[The Eng. use in this sense follows the Lat. use of *genus*, which in its turn is a rendering of the equivalent Gr. γένος. The formulation of the three grammatical genders (τὰ γένη τῶν ὀνομάτων, ἄρρενα καὶ θήλεα καὶ σκεύη) is ascribed by Aristotle *Rhet.* III. v. to Protagoras.]

Tongue* (ed. 4) §383 In the English language as now current, the traditional Gender of ancient Grammar is entirely extinct.

b. By some recent philologists applied, in extended sense, to the 'kinds' into which sbs. are discriminated by the syntactical laws of certain languages the grammar of which takes no account of sex.

Thus the North American Indian languages are said to have two 'genders', animate and inanimate. With still greater departure from the original sense, the name 'genders' has been applied to the many syntactically discriminated classes of sbs. in certain South African langs.

gene[1] (dʒi:n). *Biol.* [a. G. *gen* (W. Johannsen *Elem. d. exacten Erblichkeitslehre* (1909) 124), irreg. f. Gr. γεν- (see -GEN).] Each of the units of heredity which (except for polygenes) may be regarded as the controlling agents in the expression of single phenotypic characters and are usu. segments of a chromosome at fixed positions relative to each other; they were orig. defined as ultimate units of mutation and recombination, but are now best regarded as sequences of nucleotides within nucleic acid molecules each of which determines the primary structure of some protein or polypeptide molecule.

The term *gene* is used indiscriminately for both a genetic locus and an allele.

1911 W. JOHANNSEN in *Amer. Naturalist* XLV. 132, I have proposed the terms 'gene' and 'genotype'.. to be used in the science of genetics. The 'gene' is nothing but a very applicable little word, easily combined with others, and hence it may be useful as an expression for the 'unit-factors', 'elements' or 'allelomorphs' in the gametes, demonstrated by modern Mendelian researches. **1917** T. Molecular Biol.* x. 260 The functional genes turn out to occupy a much greater chromosomal length than the genes defined by mutation or recombination. **1971** *Sci. Amer.* Aug. 52/1 When we speak of genes, we usually have in mind the hereditary material—the DNA—in the chromosomes of the cell nucleus. Yet genes are also found outside the nucleus in the cytoplasm, notably in association with chloroplasts and mitochondria.

general ('dʒɛnərəl), *a.* and *sb.* Forms: 3-6 generale, 4-8 generall(e, (5 gendral), 3- general. [a. OF. *general* (mod.F. *général*), ad. L. *generāl-is*, f. *gener-* GENUS, class, kind, race. The word has been adopted in most of the European langs.: Pr., Sp. *general*, Pg. *general, geral*, It. *generale*, Ger. *general*, as sb. and in composition (with adj. sense), also *generell*, as adj., Du. *generaal.*

The primary sense of the Latin adj. is thus 'pertaining to the (whole) kind or class'. The word is somewhat rare in classical Latin; in the later lang., when *genus* and *species* (after the Aristotelian γένος and εἶδος) had become familiar as the technical terms for classes respectively of greater and less extension, *generalis* came to be often used in contrast to *specialis*; the antithetic use of the two words remains in all the European langs.]

In mediæval philosophy, following Aristotle, *generation* (γένεσις) and *corruption* (φθορά) are often mentioned as contrary processes, together comprehending all the changes which take place in the universe. Hence the frequent allusive use of the words, e.g. in quot. 1611.

II. That which is generated.

The use of the word in senses 3–6 is largely due to the frequent occurrence of *generatio* in the Vulgate. Translators were probably uncertain as to the exact meaning of it in certain passages, as *Isa.* liii. 8, to which the following seems to be the earliest reference in English.

For each mutation, then, a genetic death. 1959 *New Biol.* XXVIII. 23 Diverse non-adaptive evolutionary changes as may be brought about in small isolated populations by the phenomenon of 'genetic drift'. 1961 S. A. SAND in *Amer. Noturolist* XCV. 242 Our concept of a genetic system storing information should not be restricted to the denotation of 'gene' or to limited aspects of DNA structure... We would then recognize more than one type of genetic code and several classes of genetic change. 1962 *Nature* 31 Mar. 1268/1 The correspondence between groups of nucleotides and amino-acids has come to be known as the 'genetic code'. 1963 *Times* 12 Jan. 8/1 New experiments have suggested that viruses may, in effect, be genes or 'genetic messengers', the report says. 1969 *Times* 6 Jan. 10/7 If man is indeed carrying a large number of such inactive or 'nonsense' genes, the implication is that he is using only a small fraction of the genetic information that his D.N.A. is capable of storing. 1969 *New Scientist* 28 Aug. 415/2 The day may be approaching when genetic engineering may make it possible to make a plant to order. 1970 *Guardian* 8 May 3/7 Most couples who seek genetic counselling come after they have had one or more defective children. 1971 *Ibid.* 8 Oct. 13/1 Human genetic engineering aimed at the elimination of genetic diseases.

1897 L. F. WARD *Outl. 1905 W. BATESON *Let.* 18 Apr. in B. Bateson *W. Bateson* (1928) 93 The best title would, I think, be 'The Quick Professorship of the study of Heredity'. geneva[1] (dʒɪ'ni:və). Also 8 geneve, -er. [ad. Du. *genever, jenever* (the ending being assimilated to that of GENEVA[2]), ad. OF. *genevre* (F. *genièvre*):—L. *jūniperus* juniper.] A spirit distilled from grain, and flavoured with the juice of juniper berries; it is made in Holland, and is hence also called *Hollands*, formerly *Hollands Geneva.* (Often written with capital G by confusion with GENEVA[2].)

In the shortened form GIN, the name chiefly denotes a spirit of British manufacture, originally an imitation of the Dutch spirit, and usually flavoured not with juniper but with some substitute; but the words are sometimes used indiscriminately. In many works of reference in the 18th c. and even later, *geneva* is explained as the name of a spirit distilled, or obtained by fermentation, from juniper berries; but it does not appear that this was ever correct.

5. (Only in *sing.*) Native intellectual power of an exalted type, such as is attributed to those who are esteemed greatest in any department of

art, speculation, or practice; instinctive and extraordinary capacity for imaginative creation, original thought, invention, or discovery. Often contrasted with *talent*.

This sense, which belongs also to F. *génie*, Ger. *genie*, appears to have been developed in the 18th c. (It is not recognized in Johnson's Dictionary.) In sense 4 the word had come to be applied with especial frequency to the kind of intellectual power manifested by poets and artists; and when in this application 'genius', as native endowment, came to be contrasted with the aptitudes that can be acquired by study, the approach to the modern sense was often very close. The further development of meaning was prob. influenced by association with senses 1 and 2, which suggested that the word had an especial fitness to denote that particular kind of intellectual power which has the appearance of proceeding from a supernatural inspiration or possession, and which seems to arrive at its results in an inexplicable and miraculous manner. This use, which app. originated in England, came into great prominence in Germany, and gave the designation of *Genieperiode* to the epoch in German literature otherwise known as the 'Sturm und Drang' period. Owing to the influence of Ger. literature in the present century, this is now the most familiar sense of the Eng. word, and usually colours the other senses. It was by the Ger. writers of the 18th c. that the distinction between 'genius' and 'talent', which had some foundation in Fr. usage, was sharpened into the strong antithesis which is now universally current, so that the one term is hardly ever defined without reference to the other. The difference between *genius* and *talent* has been formulated very variously by different writers, but there is general agreement in regarding the former as the higher of the two, as 'creative' and 'original', and as achieving its results by instinctive perception and spontaneous activity, rather than by processes which admit of being distinctly analyzed.

gent (dʒɛnt), *sb.* [Short for GENTLEMAN.]

a. = GENTLEMAN; now only *vulgar*, exc. as applied derisively to men of the vulgar and pretentious class who are supposed to use the word, and as used in tradesmen's notices.

Early prose examples are doubtful, as they may represent only the graphic abbreviation which was formerly common; 'Gents' may be an editorial misreading for 'Gent.' = *gentlemen*. Early in the nineteenth century the word was colloquial and slightly jocular; about 1840 its use came to be regarded as a mark of low breeding.

genteel (dʒɛn'ti:l), *a.* and *sb.* Forms: 6–8 gentile, 8 gentil, 7– genteel. [A re-adoption, at the end of the 16th c., of F. *gentil*, which had been previously adopted in the 13th c., and had assumed the form GENTLE.

The re-adoption first appears in the form *gentile*, distinguished from GENTILE (= non-Jewish) by retaining the Fr. pronunciation of the *i* and the stress on the last syllable. It is probable that it was originally fashionable to retain the Fr. nasal sound in the first syll.; hence the vulgar pronunciation represented by the spelling 'jonteel', which occurs in comic literature of the early 19th c. The fully anglicized spelling *genteel* came in at the end of the 17th c.; see also GENTEE, which corresponds more nearly to the pronunciation of the Fr. word, in which the *l* is silent. Another attempt to render the Fr. sound is JAUNTY.

A few years before the middle of the 19th c. the word was much ridiculed as being characteristic of those who are possessed with a dread of being taken for 'common people', or who attach exaggerated importance to supposed marks of social superiority. In seriously laudatory use it may now be said to be a vulgarism; in educated language it has always a sarcastic or at least playful colouring.]

2. a. *Zool.* and *Bot.* A classificatory group comprehending a number of species (sometimes a single species) possessing certain common structural characteristics distinct from those of any other group.

The determination of genera, and of what characteristics are to be considered generic, is more or less arbitrary and empirical, and admits of continual alteration according to current knowledge of facts and ideas of classification in the respective sciences. The genus ranks next under the family or sub-family, and above the species; it is sometimes divided into sub-genera. The generic and specific names (always in Latin or considered as Latin) together form the scientific proper name of an animal or plant, the generic name standing first and being written with an initial capital. (The zoological term ***the genus Homo*** is popularly current as a somewhat flippant or jocular synonym for 'mankind' or 'the human race'.)

geocentric (dʒi:əʊ'sɛntrɪk), *a.* (*sb.*) [f. GEO-: see CENTRIC. Cf. F. *géocentrique*. Opposed in both senses to HELIOCENTRIC.]

1. Referred to the earth as centre; considered as viewed from the centre of the earth: as the *geocentric latitude*, *longitude*, *place*, etc. of a planet, i.e. that in which it would appear to an observer placed at the centre of the earth.

1686 *Phil. Trans.* XVI. 196 One of his [2]'s] Geocentrick places. **1726** tr. *Gregory's Astron.* I. 15 Its Geocentric Latitude will be measured by the Angle ☌ *T E*. **1784** HERSCHEL in *Phil. Trans.* LXXIV. 256 Our next business will be to reduce these two geocentric observations to a heliocentric measure. **1816** PLAYFAIR *Nat. Phil.* II. 161 If the planet's elongation from the Sun, and its geocentric latitude be observed, the inclination of the orbit may be found. **1868** LOCKYER *Elem. Astron.* 167 This latitude and longitude may be either heliocentric or geocentric, that is reckoned from the centre either of the Sun or Earth respectively. **1880** *Nature* XXI. 315 The apparent retardation of the eclipses as affected by the geocentric position of Jupiter.

2. Having, or representing, the earth as centre.

1696 PHILLIPS (ed. 5), *Geocentrick*, any Orb or Planet that has the Earth for its Center, or the same Center with the Earth. **1834** [see HELIOCENTRIC 2]. **1859** MILL *Liberty* 66 Some geocentric theory instead of heliocentric. **1865** GROTE *Plato* I. i. 14 *note*, The original system proposed by Protagoras was a geocentric system. **1880** M. PATTISON *Milton* xiii. 180 In the universe of being the difference between a heliocentric and a geocentric theory is of..small moment.

fig. **1854** DE QUINCEY *Autobiog. Sk.* Wks. II. 54 Wheel into a new centre your moral system; geocentric has that system been up to this hour—that is, having earth and the earthly for its starting-point. **1871** H. MACMILLAN *True Vine* i. 36 Regarded from this heliocentric position, difficulties and mysteries, insoluble from the geocentric position, are cleared away.

3. *sb.* An adherent of the geocentric theory.

1667 A. NOWEL in Josselyn *Voy. New Eng.* (1674) 48 This assertion is not expugned by Geocentricks who produce sense and Antiquity to support their suppositions.

Hence **geo'centrical** *a.* [+ -AL[1]] = prec.; **geo'centrically** *adv.*, as viewed from the centre of the earth; **geo'centricism**, the geocentric theory.

Decrees* Introd. 53 In 1742..Geocentricism as a scientific theory was dead.

geochemistry (dʒi:əʊ'kɛmɪstrɪ). [f. GEO- + CHEMISTRY; cf. G. *geochemie* (C. F. Schönbein 1838, in *Ann. d. Physik. u. Chem.* XLV. 281).] The chemistry of the earth; the study of the chemical composition of the earth.

1903 *Carnegie Inst. Yearbk. 1902* 27 The problems of geophysics and geochemistry involve the applications of pure physics and pure chemistry from the minutest parts of the earth to the mass of the earth as a whole. **1952** *New Biol.* XIII. 122 The science of geochemistry, with its emphasis on the dynamic exchange of molecules and ions between lithosphere, hydrosphere, biosphere, and atmosphere.

So **geo'chemical** *a.*, of or pertaining to geochemistry; **geo'chemically** *adv.*; **geo'chemist**, an expert in, or student of, geochemistry.

geochronic: see GEO-.

geochronology (ˌdʒi:əʊkrə'nɒlədʒɪ). [f. GEO- + CHRONOLOGY.] The chronology of the earth; the measurement of geological time and the ordering of past geological events. (The term *geochrone* introduced by Prof. H. S. Williams to designate a unit of geological time does not seem to have been widely adopted.)

1893 H. S. WILLIAMS in *Jrnl. Geol.* I. 294 In all these studies in which the geological time-scale is applied to the evolution of the earth.., the time concerned is not human chronology but is what may be called geochronology. For this purpose we need a standard time-unit or geochrone. **1934** *Discovery* Mar. 66/2 The high upper limits are supported by the geochronology of the Swedish geologist, de Geer. **1957** G. CLARK *Archæol. & Society* (ed. 3) v. 133 Geochronology, the chronology based on the natural changes recorded in the geological sequence, depends on many branches of natural science. **1965** F. J. MONKHOUSE *Dict. Geogr.* 1/2 *Absolute age*, in geochronology, the dating of rocks in actual terms of years.

Hence ˌ**geochrono'logical** *a.*, of or pertaining to geochronology; ˌ**geochrono'logically** *adv.*; ˌ**geochro'nologist**, an expert in, or student of, geochronology.
